together by bridging the gaps
that divide us.*

A CASE FOR SUPPORT

FOR *all* TIME

Program Investment to Support Students

Keeping pace with a growing need for skilled workers, an increased demand for technical education, and an ever-present need to keep current with changes to industries and technology means investing in existing programs and expanding into new ones.

To do this, Dunwoody must invest in several key areas. This includes: technology, software, and tools needed to stay competitive; wrap-around support structures, such as tutoring, mentoring, and mental health resources to help students stay on track for graduation; and industry-experienced faculty, committed to student success.

TECHNOLOGY & TOOLS:

Space for program expansion, modern workstations, and current software and technology tools will be needed to remain competitive.

SUPPORT STRUCTURES:

Investing in wrap-around support systems such as increased monitoring and outreach, additional student life activities, and access to tutoring, mentoring, and mental health resources helps students stay on track from enrollment through graduation.

INDUSTRY-TRAINED FACULTY:

Investing in the next generation of experienced faculty who understand industry and care about all student success.

Program Support Areas

School of Engineering

Dunwoody currently offers three four-year engineering degrees within its School of Engineering: Mechanical, Electrical, and Computer. Additional programs and increased enrollment will drive the need for more classroom and lab space, along with investments in the tools and technology needed to educate work-ready engineers.

School of Design

Our School of Design — which unites Dunwoody's design-focused programs in architecture, graphic design, and interior design — is quickly creating interdisciplinary opportunities that will make the programs even more attractive. Space for program expansion, modern workstations, and current software and technology tools will be needed to remain competitive.

New Program Development

Continuing to monitor industry needs and research the viability of adding programs is essential to fulfilling our mission.

Be Part of the Transformation

A private, non-profit College, Dunwoody is grateful for everyone who chooses to support our mission of changing lives. Each year, financial support impacts hundreds of students and staff by providing tuition assistance, scholarship support, funding equipment, and other classroom resources. Big or small, these gifts are vital to keeping Dunwoody strong and helping educate our future leaders.

Dunwoody College of Technology accepts gifts of cash, securities, and planned gifts. Each giving option has its own tax and financial implications and advantages.
